

Realtime price checking and

Commercial teams lack a single source of truth for competitor pricing, promotions, bundles, vouchers, and channel-level pricing gaps.

CREATE PROJECT UNAVAILABLEPROJECT CREATION OPENS LATER.

Problem statement

Guardian lacks real-time competitive price visibility across omnichannel marketplaces.

AI capabilities

Develop an AI-powered pricing platform that automatically monitors and compares prices in real time or at a daily point-in-time cadence for the Top 200 SKUs.

The platform should create a pricing index for Guardian versus competitors across key channels including competitor websites, supplier-owned stores, TikTok Shop, Shopee, Lazada, GrabMart, and other relevant e-commerce platforms.

The solution should identify price gaps, promotion mechanics, bundle offers, voucher impacts, flash sales, and pricing trends, while generating alerts for significant price changes and pricing opportunities.

Expected outcomes

- Establish a single source of truth for pricing intelligence.
- Provide daily real-time visibility of competitor pricing and promotions across all channels.
- Provide a competitor pricing index for Guardian versus competitors in each channel in real time.
- Reduce manual price monitoring effort by more than 90%.
- Enable commercial teams to make data-driven pricing and promotion decisions in real time.
- Improve pricing competitiveness and margin management.

Target users / teams impacted

- Commercial Team: Category Managers and Trade Planning team.
- Data team.
- E-commerce Team.

Data availability & readiness

- Available: internal SKU list with barcode matching with other retailers, product hierarchy, current selling prices, and promotion data.
- Required: external competitor pricing data from websites and marketplaces via APIs, web scraping, or third-party data feeds.
- Readiness: medium; internal data is available, external data collection and mapping required.

BUILD DIRECTION

Build a pricing intelligence platform that monitors key SKUs across competitor sites, supplier-owned stores, marketplaces, and delivery channels.
